

ABC Company — Google Ads API Tool

Design Documentation · Basic Access Application

1. Company Name

ABC Company — `https://skool-google-ads-series.vercel.app/`

2. Business Model

ABC Company is a licensed residential plumbing business serving homeowners across the Greater Toronto Area. We provide leak repair, drain cleaning, water heater service, fixture installation, and emergency plumbing. We use Google Ads only to advertise our own business and reach local homeowners searching for plumbing services. We do not advertise on behalf of any third party, and we only run ads for the website we own.

3. Tool Access and Use

The tool is an internal dashboard used only by ABC Company. It is operated by a single owner/operator and is not made available to external users, customers, or third parties. There is no public sign-up, no multi-tenant access, and no resale of access or data.

4. Tool Design

The tool authenticates to our own Google Ads manager account using OAuth credentials. On request from the operator, it reads reporting data from the Google Ads API and displays it in an internal dashboard — campaigns, ad groups, keywords, and search terms. When the operator reviews the data and approves an action, the tool applies it: creating a new Search campaign from a template the operator confirms, or adding keywords and negative keywords. All write operations are user-initiated and reviewed before they are submitted; nothing is changed automatically.

5. API Services Called

- `GoogleAdsService.search` — reporting across campaign, ad group, keyword, and search-term resources
- `CampaignService` — create and configure new campaigns the operator approves
- `AdGroupCriterionService` — apply approved keyword and negative-keyword changes
- `KeywordPlanIdeaService` — keyword research for campaign planning
